

CLAIMS

What is claimed is:

1.A electric-business method of a merchandise, said method
5 comprising:

providing said merchandise, said merchandise having a
plurality of items that are executed by an electric device and thereafter
display a plurality of functions of said merchandise;

selecting the parts of said items; and

10 evaluating a selling price of said merchandise according to said
selected items.

2.The electric-business method of claim 1 further comprising:

communicating a request system to a system of merchandise
15 service, said system of merchandise at least storing a plurality of
computer-executive programs corresponding to said merchandise and
said items; and

outputting said merchandise to said request system wherein
said merchandise comprises said selected items.

20 3.The electric-business method of claim 2, wherein said request system
transmits a serial number comprising a plurality of bytes to said
system of merchandise.

4.The electric-business method of claim 3, wherein said serial number comprises:

a server code related to said request system;

a version code related to a version information of said
5 merchandise preexisted in said request system; and

an authorization code related to an expiration time of said
merchandise preexisted in said request system, said authorization
renewed according to an execution time by said request system.

10 5.The electric-business method of claim 3, wherein said serial number
is changed after the evaluating step.

6.The electric-business method of claim 2, wherein said
communicating step is implemented through a wire network.

15 7.The electric-business method of claim 2, wherein said
communicating step is implemented through a wireless network.

8.A electric-business method of a software merchandise, said method
20 comprising:

communicating a first electric device to a second electric
device;

providing said software merchandise by said second electric
device, said software merchandise displaying a plurality of function

through a plurality of items executed by a computer;

selecting parts of said items by said first electric device;

building a customized software merchandise according to said selected items;

5 evaluating a price of said customized software merchandise;

and

outputting said customized software merchandise to said first device.

10 9.The electric-business method of claim 8 further comprising executing a payment procedure according to said price between said first electric device and said second electric device.

15 10.The electric-business method of claim 8, wherein said communicating step comprises transmitting a serial number between said first electric device and said second electric device.

20 11.The electric-business method of claim 8, wherein said outputting step comprises a serial number included in said customized software merchandise.

12.The electric-business method of claim 11, wherein said serial number comprises:

a registry code related to communication of said first electric

device and said second electric device; and

an authorization code related to an expiration time of said customized software merchandise.

5 13.The electric-business method of claim 12, wherein said authorization code is changed dependent on an execution time on said first electric device.

10 14.The electric-business method of claim 8, wherein said second electric device comprise at least a server belonging to an application service provider.

15.A electric-business method of a customized merchandise, said method comprising:

15 accepting a request of merchandise service from an exterior electric device;

displaying a plurality of items of a merchandise according to said request of merchandise service, said items executed by a computer performing a plurality of functions of said merchandise;

20 accepting a request of item selection, said request of item selection for selecting parts of said items;

calculating a price of said merchandise, said price dependent on said selected items; and

outputting said merchandise to said exterior electric device.

16.The electric-business method of claim 15 further comprising:

accepting a request of payment from said exterior electric device;

5 inspecting an identification from said exterior electric device;

generating a serial number of said merchandise according to said merchandise, said selected items and said request of merchandise service; and

transmitting said serial number to said exterior electric device.

10

17.The electric-business method of claim 15, wherein said request of merchandise service comprising a utility information related to said merchandise that is preexisted in said exterior electric device.

15

18.The electric-business method of claim 15, wherein said serial number comprises an expiration time of said merchandise executed by said exterior electric device.

20

19.The electric-business method of claim 15, wherein said request of merchandise service is transmitted through a wire network.

20.The electric-business method of claim 15, wherein said merchandise comprises a product of package software.
